

Instructions for Harvia Forte heater that is always ready for bathing

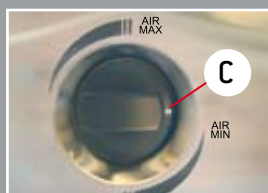

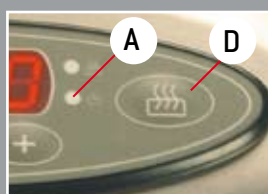

The control panel display shows the standby temperature of the stone space. A minimum temperature of 260–280 degrees is required to keep the heater ready for use. Lamp A is lit to indicate standby mode "LO". Use the [-] and [+] buttons to adjust the standby temperature.

Before bathing:

1. Open the heater cover.
2. Turn air circulation valve C to the AIR MAX position.
3. Use control panel button D to switch the heater to full power "HI"; indicator lamp E lights. Unless adjusted, the "HI" heater power remains on for a maximum of one hour.
4. Wait for appr. 15 minutes. The temperature in the sauna will rise to 50–60 degrees.
5. Start bathing. Adjust the air circulation valve towards the closed position if the temperature of the sauna rises too high. Throw water on the stones according to your desire.

After bathing:

1. Wipe off any splashes of water from the heater cover structures to prevent the lime content of the water from causing spots on the surface.
2. Close heater cover.
3. Use control panel button D to restore the heater to "LO" mode; indicator lamp A lights.
4. Turn air circulation valve C to the AIR MIN position.

NOTE! To keep the heater ready for use, don't switch the heater off.

Harvia Forte –
For relaxation!
